

Volunteers Needed for fMRI Research Study

Volunteers are needed for a study that aims to learn more about how men and women differ in the way their brains respond to food and hunger. It also plans to learn more about how hormones and the menstrual cycle affect these responses.

Participants will complete:

- 2 to 4 MRI scans
- Food, attention, and mood questionnaires
- Blood draws for measuring hormones

Study Volunteers Must:

- Be between 18-45 years old
- Not have metal or electronic devices in their body
- Not be claustrophobic
- Not currently be using hormonal contraceptives

In order to enroll, all participants must meet specific criteria. The list above is only a partial list of requirements to participate in this research study. Only a clinical research staff member can determine eligibility.

If interested in participating, please click the link below to complete our screening questionnaire:
