## SESSION 17: When Weight Loss Stalls

## Session Focus

Taking action when your weight loss stalls can help you continue to lose weight or maintain your weight loss.

This session we will talk about:

- Why weight loss can stall
- How to start losing weight again

You will also make a new action plan!

## Roxanne's Story

Roxanne is working on managing her weight. Her goal is to lose 22 pounds by eating well and being active.

During the first six weeks, Roxanne loses 12 pounds. That's an average of two pounds each week. But she loses just half a pound during week seven. And she doesn't lose any weight during week eight.

Before she lost weight, Roxanne weighed 168 pounds. She needed 1,750 calories a day to stay at the same weight.

Now that Roxanne weighs 156 pounds, she needs just 1,650 calories a day to maintain
her weight. That means her daily calorie needs have dropped by 100 calories.

Since Roxanne's daily calorie needs have changed, she decides to set new eating and fitness goals. She makes small changes in her lifestyle to cut 100 calories each day.

These days, instead of drinking a 16-ounce coffee with whole milk with breakfast, she has a 12-ounce coffee with skim milk. Plus, she now uses resistance bands while she watches TV. This burns calories and builds muscle.

These small changes add up. Roxanne is now losing one to two pounds each week.

## ROXANNE'S DAILY CALORIE NEEDS

Before Roxanne lost weight:
Weight: 168 pounds
Daily calorie needs: 1,750 calories

Now:
Weight: 156 pounds
Daily calorie needs: 1,650 calories

Change in daily calorie needs: -100

## 25 Snacks Under 100 Calories

1. 13 whole almonds
2. 1 small oatmeal cookie
3. 2 medium kiwis
4. 3 tablespoons hummus
5. $1 / 2$ cup fat-free yogurt
