# Six Minute Walk Distance

---

Record ID

---

---

Was this completed as a part of standard care?

☐ Yes  
☐ No

---

Was patient able to complete the 6 minute walk test?

☐ Yes  
☐ No

---

Testing timepoint

☐ 3 months  
☐ 6 months  
☐ 12 months

---

6MWT instructions for coordinator:

Measure the total distance the individual walks over 6 minutes.

Have the individual walk back and forth down the measured 30 meter hallway in the outpatient CTSC. Start timing when you instruct the individual to start walking. Stop timing at 6 minutes.

Assistive devices can be used but should be kept consistent across repeat tests. Do not perform if physical assistance is necessary for walking or if the individual is unable to walk.

Prior to starting, ensure the hallway free of obstacles and have a stopwatch/timer available.

Patient Instructions:

"Cover as much ground as possible over 6 minutes. You may use an assistive device to walk if you normally use one. Walk continuously if possible. You may slow down or stop to rest if needed."
