

You can make a difference in Alzheimer's research

People with Down syndrome contributed to the earliest breakthroughs in Alzheimer's disease almost 40 years ago.

Now researchers want to bring the latest discoveries in the Alzheimer's field to **you**.

Funded by the National Institutes of Health's INCLUDE initiative, TRC-DS matches people with Down syndrome to clinical trials for Alzheimer's disease.

If you are a healthy person, ages 25-55, with Down syndrome, learn how you can make a difference. Visit TRCDS.org.
