(Don't worry about right or wrong answers.)

- Based on what you know about Lauren and what you currently know about opioid use disorder – do you think there is an opioid use disorder?
- Do you think Lauren is appropriate for outpatient treatment?
- What would you recommend?
- How would you discuss your recommendations with the patient?

ITLATTTRS

Assessment Step 1: identifying patients with dependence and use disorder

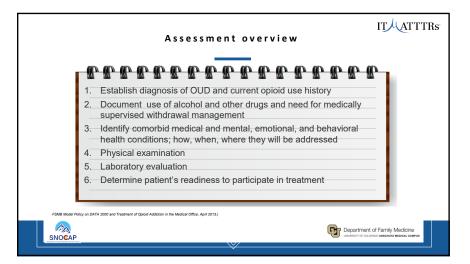

Fullhuld#rufR slrbfK vh#G lvrughufDSduvfH#HGVP 08,

Practices can "observe" but also actively screen for opioid <u>dependence</u> and use disorder:

- Who does screening for other conditions in your practice?
- Who can do these screenings? Anyone? Just the prescriber?
- Screening tool(s) are included in your IT MATTTRs™ MATerials Toolkit.

ITATTRS

Assessment Step 1: identifying patients with dependence and use disorder

Fullhuld#irutRslrlg#Kvh#GlvrughutDSduv#4##GVP08,

What are we looking for?

- Opioids taken in larger amounts or over longer period than intended
- Persistent desire or unsuccessful efforts to cut down or control opioid use
- Great deal of time spent obtaining, using, or recovering from effects of opioids
- Craving/strong desire or urge to use (new to DSM-5)
- Recurrent use resulting in failure to fulfill major role obligations at work, school, home

Assessment Step 1: identifying patients with dependence and use disorder

IT ATTTRS

Fullhuld#rufk slrlg#kvh#6 lvrughuthSduv#4#GVP 08,

What are we looking for?

- Continued use despite persistent or recurrent social or interpersonal problems exacerbated by effects of opioids
- Social, occupational, or recreational activities given up or reduced due to use
- Recurrent use in situations where physically hazardous
- Use continued despite persistent or recurrent physical or psychological problem likely to have been caused or exacerbated by opioids
- Tolerance

Not applicable if used as Withdrawal

Assessment Step 1: identifying patients with dependence and use disorder

Opioid use history

- Quantity used per day
- Type: heroin, prescription opioids
- Routes: IV (vein), IM (muscle), SC (under skin), PO (oral), intranasal, inhaled
- Last used, date and time
- Previous attempts to discontinue
- Past treatment experience
 - o Non-pharmacologic (e.g., counseling, support groups)
 - o Pharmacologic with agonist (methadone, buprenorphine) and antagonist (naltrexone) therapies

Diagnostic

code F11

Patients with moderate

"use disorder" score

can benefit from

buprenorphine therapy

- not just severe cases!

IT ATTTRS Assessment Step 2: alcohol and other drugs

Use of other drugs does not mean patient cannot receive buprenorphine treatment

- Screen for unhealthy alcohol and other drug use, assessing:
- o Substance use disorder (DSM 5)
- o Other consequences (medication interactions, medical complications)

Drug Screening:

• "How many times in the past year have you used an illegal drug or used a prescription medication for non-medical reasons?"

Tip: Assessing need for MAT

IT ATTTRS

Qualities of the healthcare team interviewer

- Non-judgmental, curious, respectful
- · Follows up on vague or "qualified answers"

To facilitate effective treatment

- · Acknowledge some information is difficult to talk about
- · Ask questions out of concern for patient's health
- · Avoid using labels or diagnoses
- Assure confidentiality

Assessment Step 3a: identify co-morbid conditions

IT ATTTRS

Medical co-morbidities

- Past and present medical illnesses, hospitalizations, surgeries, accidents/injuries
- · Current medications, drug allergies
- Is the patient taking other medications that may interact with buprenorphine, e.g., opioids, naltrexone, sedative-hypnotics?

Assessment Step 3b: identify co-morbid conditions

ITATTRS

Mental, emotional, and behavioral (MEB) co-morbidities

- Understand history of inpatient and/or outpatient treatment
- Determine if the patient is psychiatrically stable
- Tailor behavioral health care to the patient's needs (revisited in Module 3)
- Recommendation:
 - Provide initial treatment with buprenorphine to allow patients to think more clearly, stop the cycle of addiction, and increase time and energy to address behavioral and social issues.
 - o Identify behavioral health partners after patient stabilizes physically.
 - Recognize that behavioral health care is not limited to therapy. Supportive care provided by your care team at all stages of MAT are important components of behavioral health care.

Assessment Step 4: physical exam

- Vital signs
- Standard physical examination
- Pay attention to (does not preclude treatment):
- o Signs of injection drug use, e.g., needle tracks, skin and soft tissue infections
- o Signs of chronic infections, e.g., HIV, hepatitis C
- o Neurocognitive function
- o Liver disease and dysfunction

Assessment Step 5: laboratory evaluation

- Liver function tests
- Hepatitis and HIV serologies
- Pregnancy test for women
- Urine drug testing
- o Naturally occurring opiates (morphine [heroin], codeine)
- o Synthetic and semisynthetic opioids (methadone, oxycodone)
- o Other commonly used drugs (cocaine, amphetamines, benzodiazepines)

Gordon and Krumm, 2008 Federation of State Medical Boards Model Policy, 2013

Assessment Step 6: patient readiness Is the patient ready to participate in treatment? What motivates the patient to do this? Patient understands the risks and benefits of (and alternatives to) buprenorphine treatment

- Patient expects to follow safety procedures
- Patient has stable psychosocial circumstances that will support treatment
- Any indication of commitment? Your team can:
 - o Enhance motivation in low readiness
 - o Support motivation in moderate to high readiness
 - o Create an Action Plan in high readiness, e.g. MAT?

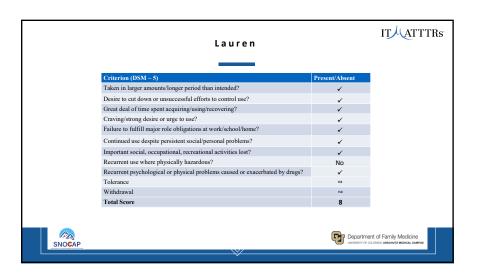

Who are better candidates for MAT with buprenorphine?

- IT ATTTRS
- Patients with history of overdoses, particularly following detoxification
- Patients who have been opioid-free but never felt "normal"
- Patients in whom MEB illness emerged/worsened after previous detoxes
- Patients with mild to moderate chronic pain requiring chronic opioid pain treatment

Are you ready to help your patient?

IT ATTTRS

Words of wisdom

- Don't start with the most complicated patient
- Start with one patient, not 30
- Know your limits
- Don't be afraid to consult with colleagues or other resources

"Be patient, my heart: for you have endured things worse than this before."

- Homer, The Odyssey

IT ATTTRS

MODULE 2 WRAP UP

- You are already doing many of the assessments done to identify and prepare patients for MAT.
- Specific team members need to be responsible for doing screens and assessments. Who will that be here?
 Patients with a moderate or severe opioid use disorder
- Patients with a moderate or severe opioid use disorder (≥4 criteria) can benefit from buprenorphine therapy.
- Treatment Agreements help practices and patients work through important decisions, such as how to handle relapses, and set expectations for everyone.

IT ATTTRS

IT ATTTRS

MODULE 3 Sneak Preview

THE PRACTICE

- What does the team do (front desk, nursing, prescriber, behavioral health, billing)?
- What are the phases of MAT (Induction, Stabilization, Maintenance)?
- Who can help? You can help.
