

FROM THE DIRECTOR

Welcome to the University of Colorado's Center for Health Artificial Intelligence. We are excited to have you onboard! We look forward to building a diverse team of educators and researchers who will share the Center's core values and guide the Anschutz Medical Campus as we translate data into advances in research practice, health care delivery, and population health and scale these to provide nationwide benefit through innovative technologies.

We believe in you and know you'll do great things. We hire folks who have a skill set that we feel positions them for success and the excitement and enthusiasm to work together to positively transform our Center, the University, and our community. We'll invest in your growth and equip you with the tools to do your best work. The Center is committed to providing quality support and resources to all our faculty members.

I look forward to watching the impact you will make here.

Casey Greene, PhD

Director – Center for Health Artificial Intelligence
University of Colorado Anschutz Medical Campus
