A “Boot Camp” to Support Med-Peds Interns in Specialty Transitions
David R. Scudder, MD, Samantha G. Robin, MD, and William A. Manning, MD

BACKGROUND
- Med-Peds interns have to frequently switch between Internal Medicine & Pediatrics
- The initial transition is often anxiety-provoking for interns
- No published curriculum on supporting the transition

METHODS – CURRICULUM DESIGN
- Half-day session
- Near-peer & intern-to-intern teaching models
- Interactive cases, chalk talks, EMR set-up

METHODS - FRAMEWORK
Used Kern’s 6-Step framework to conduct needs assessment, design new curriculum, and elicit feedback

RESULTS
- Interns surveyed before and after boot camp.
- Fewer interns felt moderately or very nervous to make the first transition (25% post vs 75% pre).
- More interns felt very confident in using the EMR at their upcoming site (75% post vs 50% pre).
- All interns felt moderately or very confident in their understanding of senior resident and attending expectations post-curriculum (100% post vs 0% pre).

CONCLUSIONS
- Dedicated transition curriculum reduced intern anxiety and better prepared interns for their first transition.
- Next steps: incorporate feedback to expand annual curriculum
