**Coronavirus Now Claiming Lives Of Colorado Patients Under 50**

“New patients are being admitted to the hospital at a faster rate than patients are recovering, and as a result the hospital census is steadily increasing, putting even more strain on our capacity and resources,” said **Marc Moss** from the University of Colorado School of Medicine, who joined Polis to talk about the state’s health care crisis.

*CBS4, March 30, 2020*

**Colorado governor says spread of coronavirus is slowing, but says second person in their 40s has died**

**Marc Moss**, who leads the pulmonology and critical care medicine division at the University of Colorado medical school, accompanied Polis during Monday’s news conference….“The COVID patients we are treating are on average in their 40s and 50s and some are as young as 19 years old,” he said. “Many of these patients were healthy with no other preexisting conditions. This pandemic can affect anyone.”

Specialists, Primary Care Doctors Retrain For Hospital Frontlines As Colorado Coronavirus Cases Mount

“It’s just going to be a matter of getting back on the bike and riding it. Undoubtedly, I’ll look at some references, to make sure my memory serves,” said Rich Altman, [assistant professor of medicine at CU School of Medicine] who normally works in a primary care clinic for UCHealth. “The thing that most docs are going to have trouble with isn’t the medicine of it, it’s the technology and the workflow: Where do I even start?”

“The medical skills aren’t that different … So the training isn’t specifically, how do you diagnose pneumonia? Because everyone sort of knows that,” said Tyler Anstett, [assistant professor of medicine at CU School of Medicine] who has been leading UCHealth’s effort to gear up for a COVID-19 surge.

“We are in the thick of it,” said Chris Davis, [associate professor of emergency medicine at CU School of Medicine] and the system’s medical director for virtual health. “These are doctors who are already credentialed, trained, active and they say ‘how can I help?’ And it’s back to that sort of patriotic, volunteerism: ‘We’re in a pandemic disaster. How can I help because I’m not busy.’”

Brandon Combs is among those gearing up to head into a hospital after working in a UCHealth outpatient clinic in Denver’s Lowry neighborhood for the past several years. “I think many of us have a strong sense of duty,” Combs said. “I think to have a valued and an applicable skill set and to not employ it doesn’t feel like the best. If there is a need and my colleagues and my patients need my assistance, it just feels like something I have to do.”

CPR News, April 2, 2020

Colorado readies guidelines for prioritizing coronavirus patient care in case of hospital overload

“There may be dire circumstances where our resources are unable or are insufficient to provide optimal care to everyone,” said Darlene Taddy, a physician at the University of Colorado Hospital [and associate professor of medicine at CU School of Medicine] who serves on the Governor’s Expert Emergency Epidemic Response Committee, or GEEERC. “Should we reach that moment, I hope community
members will feel we have done our due diligence in using the utmost sense of fairness and ethics in what we write."

“This is statewide guidance on how to do triage in the most ethically defensible way,” said Matthew Wynia, director of the Center for Bioethics and Humanities at the CU Anschutz Medical Campus. It’s expected that the group will forward its report to the governor’s office in the next week to 10 days.

*Denver Post, April 1, 2020*

**Colorado Is Creating Guidelines To Help Make Excruciating Coronavirus Care Decisions**

“Crisis standards of care is not a decision point. It is thrust upon you. You have to make decisions. These are forced choice,” said Matthew Wynia, the Director of the Center for Bioethics and Humanities at the University of Colorado. “This is like Sophie’s Choice kind of decisions where you’ve got two, three, four people, all of whom are likely to die without a ventilator. And you’ve only got one ventilator left in your hospital.”

“It’s not something I ever thought I might have to face,” said Emmy Betz, an emergency room physician at University of Colorado School of Medicine. “We’re trained to do whatever we can for a patient, as medically appropriate and in line with what that patient wants. So even the thought of having to decide which patient gets a resource — of having to ‘triage’ resources — is terrifying.”

*CPR News, April 2, 2020*

**What You Can Do About Coronavirus Right Now**

“Your hands carry almost all your germs to your respiratory tract. Keeping them as clean as possible is really helpful,” said Adit Ginde, a professor of emergency medicine at the University of Colorado School of Medicine. “It would dramatically reduce transmission if people did it well.”

*The New York Times, March 26, 2020*

**Should I Make My Own Mask?**

“I still believe that masks are primarily for health care workers and for those who are sick to help prevent spreading droplets to others,” said Adit Ginde, a professor of emergency medicine at the University of Colorado School of Medicine. “However, I do believe that for limited circumstances when individuals must be in close quarters with others,
a correctly positioned mask or other face cover for a short duration could be helpful."

*The New York Times, March 31, 2020*

**Good Question: Is There a Way to Prevent Coronavirus?**

“The clinical trial that we did a couple years ago in Colorado was actually done in over 20 long term care facilities,” said Adit Ginde, professor of emergency medicine at the University of Colorado School of Medicine. “So with older people living in assisted living and nursing homes, and actually found that giving vitamin D-deficient individuals high doses of vitamin D, reduces their risk of getting respiratory viral infections by 40%.”

*CBS4, March 31, 2020*

**Could vitamin D be a tool to ward off COVID-19?**

Interview with Adit Ginde, professor of emergency medicine and director of research at the University of Colorado Anschutz Medical Campus, regarding his research on vitamin D deficiency and respiratory viral infections.

Ivor Douglas [professor of medicine at CU School of Medicine] has a hard job that’s only going to get harder. The intensive care pulmonologist is leading the COVID-19 response at Denver Health. So far, Douglas said medical staff has been able to handle an increasing number of patients, but he told CPR’s Colorado Matters that resources could quickly run out without help from the public. “Buckle down and adhere to the social separation guidelines for a long time,” he implored. “Please don’t let up on this. It is crucial for us to do the work we’re doing for folks in the community to understand the social contract obligation that they have right now.”

CPR News, March 27, 2020

Not So Fast Using CPAPs In Place Of Ventilators. They Could Spread The Coronavirus.

“In general, we’re just telling them not to use it,” said Comilla Sasson, an associate clinical professor of emergency medicine at the University of Colorado School of Medicine. “Because we are concerned about community spread, and we have to assume that anybody with respiratory distress is a COVID patient.”

James Finigan, a pulmonology and critical care specialist at National Jewish Health in Denver [and assistant professor of medicine at CU School of Medicine]. “Theoretically, a CPAP might be enough to get them enough oxygen. But, again, doing it with a mask is more likely to generate an aerosol and create an infectious problem.”

Jeff Sippel, a critical care specialist at UCHealth [and associate professor of clinical practice of medicine at the CU School of Medicine], said BiPAPs could be used for COVID-19 in a closed system without a mask if patients are first fitted with a breathing tube. “The hardware actually fits,” he said.
In most parts of the U.S., the need for extra breathing devices in health care facilities is not yet critical. But hospitals are bracing for a surge in patients who will need respiratory support. “This is getting real now,” said Matthew Wynia, an internist and bioethicist who has been working on UCHealth’s COVID-19 plans. “We are about to be slammed.”
