[Thornton Teenager Has ‘New Life’ After Complicated Double Organ Transplant](#)

“Hi, you’re looking good,” said **Shikha Sundaram**, a hepatologist at Children’s [and CU School of Medicine], as she greeted her longtime patient, LaShawn Prince. La Shawn got a big hug.

But multiple blood transfusions made finding organs his body wouldn’t reject nearly impossible. “He had antibodies against pretty much 99 to 100% of the population,” explained **Margret Bock**, nephrologist at Children’s [and CU School of Medicine].

[Is it safe to travel to high altitudes when pregnant? Yes, to a point](#)

When you’re pregnant, your body should typically acclimate to the lower oxygen levels, thereby ensuring your baby continues to receive adequate oxygen. So, for women who are healthy and have a complication-free pregnancy, traveling up to 8,000 feet above sea level is generally considered safe says **Annie Porter**, an obstetrician in the Maternal Fetal Medicine Fellowship Program at University of Colorado Anschutz Medical Campus.

[Coronavirus vs. flu in Colorado](#)

UHealth Director of Infection Prevention **Michelle Barron** [professor of medicine at CU School of Medicine] discusses the impact of coronavirus vs. the flu this winter.

9News, Feb. 21, 2020

[How Denver has prepared for possible coronavirus outbreak](#)

We asked a similar question of **Michelle Barron**, the medical director of infection prevention at UHealth, about what social isolation would look like: “Most of it would probably involve limiting big public gatherings, so if a Phish concert was happening, perhaps that would be asked to be canceled. So, a lot of it is what we call social distancing where you just don’t have hundreds of people or thousands of people en masse, in close proximity to each other.”

[Coloradans should prepare for the coronavirus like they would a snowstorm, health officials say](#)

“It’s appropriate to say we will probably see more cases in the U.S. and throughout the world, but I don’t think that should set off an alarm,” said **Michelle Barron**, the medical director of infection control and prevention at UHealth University of Colorado Hospital.

“In the hospital setting, we use them when we’re taking care of children who have coughing, cold, runny noses,” said **Chris Nyquist**, medical director for infection prevention control at Children’s Hospital Colorado [and professor of pediatrics at CU School of Medicine]. “One of the challenges is, nationwide and internationally, there’s limited

supplies for the masks, so it's really important for people to use them appropriately."

Denver Post, Feb. 27, 2020

['Not our first rodeo with new germs': To prep for coronavirus, hospitals use lessons learned n past epidemics](#)

"Everybody is trained on how to use the personal protective equipment, but we are doing additional what we call 'just in time' training for front-line staff, so they can practice again how to put on the masks, make sure they have the right fit and really feel confident with the personal protective equipment that they're putting on," said **Heather Young**, an infectious diseases physician and medical director of infection prevention at Denver Health [and assistant professor of medicine at CU School of Medicine].

[Children’s Hospital Colorado Study Shows Increase In Trampoline Injuries](#)

Gaia Georgopoulos, a pediatric orthopedic surgeon at Children’s Hospital [and associate professor of orthopedics at CU School of Medicine], performed surgery hours later, putting two plates and six pins in Nell’s leg. For about four weeks, the toddler wore a cast that went from her ankle to her ribs. “It doesn’t take a lot of force,” Georgopoulos said. “Just the impact of them coming down and the tramp coming up is enough to break their bones.”

[LIFE FORCE After two decades of success, Fitzsimons Innovation Community plots an even bigger bioscience footprint](#)

When **Robin Shandas** was teaching in Boulder, he often ran into a problem. As head of the University of Colorado's bioengineering department, he found that being in Boulder made it difficult to collaborate... That situation changed markedly, however, when the bioengineering department moved across the street from the University of Colorado Anschutz Medical Campus. "The way we set up, they can see patients, then walk across the street to teach students, then walk back to the clinic," Shandas said. "That type of experience, there's not that many places around the country with that level of access."

The Center for Surgical Innovation (CSI) started across the street on campus, but as it grew it needed to develop a larger lab that could accommodate more people, said **Sarah Massena**, business director for CSI. In 2015, it moved into 4,500 square feet in Bioscience 1. “We have very quickly grown out of that lab, because the demand for people who want to train with us has increased a lot,” Massena said.
