[Med students get real life lesson during coronavirus pandemic](#)

“It’s really tough,” said **Jaclyn Anderson**, a medical student at the University of Colorado School of Medicine. “I’ve really enjoyed all the patient interactions. As a medical school class, we’ve come together really well.” Anderson and the other medical students are now learning virtually. The university even created a [coronavirus class](#), where they learn about COVID-19 as it spreads in real time.

The students are also helping educate the community about the coronavirus. “(They’re) curious, scared, wondering if they should be wearing masks, what kind of masks,” said **Nicholas Bianchina**, another medical student at the University of Colorado School of Medicine. “And we can help answer those questions.”

[Mystery Inflammatory Syndrome In Kids And Teens Likely Linked To COVID-19](#)

“If [the child is] looking particularly ill, you should definitely call the doctor,” says **Sean O’Leary**, a pediatric infectious disease specialist at Children’s Hospital Colorado Anschutz Medical Campus and member of the infectious disease committee for the American Academy of Pediatrics.

NPR, May 7, 2020

[Inflammatory syndrome that could be linked to COVID-19 hospitalizing children in 9 states](#)

"We have all been on the lookout for these cases ever since we heard about them," said **Sam Dominguez**, an infectious disease specialist at Children's Hospital Colorado [and associate professor of pediatrics at CU School of Medicine].

9News, May 11, 2020

[Mysterious illness in children may be linked to coronavirus](#)

"There's a spectrum of disease, and so what we are seeing here is probably just the very most severe spectrum of this presentation in children," said **Sam Dominguez**, Children's Hospital Colorado [and CU School of Medicine].

KLEW (Lewiston, Idaho), May 13, 2020

[What is Kawasaki disease?](#)

"Early diagnosis and treatment is the key to prevent coronary artery aneurysms or dilation," **Pei-Ni Jone**, an associate professor of pediatrics at the University of Colorado School of Medicine told TODAY, via email. "Please contact your primary care physician if your child presents with high fever, red eyes, red lips, big lymph nodes and rash so that early recognition of the diagnosis can happen. Early treatment will prevent coronary artery dilation."

[Prince George's jail must plan to test more inmates for covid-19, federal judge orders](#)

Carlos Franco-Paredes, a clinician from the University of Colorado School of Medicine, examined the jail last week as part of the lawsuit....Franco-Paredes said during Monday's hearing that during his inspection last week, jail officials appeared to be following jail operating recommendations by the CDC. "I think for the most part they

were in compliance with CDC guidelines at the time of the inspection,” he said.

Washington Post, May 11, 2020

[To put Covid-19 behind us, all Americans should be vaccinated against it](#)

Opinion by **Lauren S. Grossman**, assistant professor of emergency medicine at the University of Colorado School of Medicine, and medical director of the university’s Integrative Medicine Center: “We can’t afford another pandemic with millions sick or dying, a health care system stretched beyond its limits, and a devastated economy. Immunization for all is a simple way to prevent that from happening.”

STAT, May 12, 2020

[CU researchers working to address food insecurity on the Western Slope](#)

“That stigma most likely interferes with all of the work we do to try and address food insecurity. It can make people not want to tell a medical provider or someone at their child’s school that they’re food insecure and then also make them less likely to contact an organization that might help them address their food needs,” explains **Anne Nederveld**, Assistant Professor with the CU Department of Family Medicine.
