SNOCAP PBRN Network Structure

What is SNOCAP?
SNOCAP stands for State Networks of Ambulatory Practices and Partners. We are the umbrella organization that provides coordination with and collaboration between a network of PBRNs hard at work in Colorado.

We are leading the charge for healthier communities.

Current PBRN research efforts began around 2004 and are all organized under the umbrella of SNOCAP the overarching name for the collaborative affiliation of practice-based research networks in Colorado. These practices and partners, joined together to improve communications, facilitate joint research projects, and share research staff and resources.

Because of the variations in size, funding, and organizational structure, research conducted across SNOCAP is more generalizable than that conducted in more uniform PBRN networks.

Working together as SNOCAP partners have improved collaboration and resource sharing, while allowing medical networks to maintain their separate and very unique identities. BIGHORN, Colorado; COCONet, HPRN, and PEACHnet are independent PBRNs that can conduct individual research studies, yet can function more efficiently thanks to the infrastructure provided by SNOCAP.

Partners Research Range and San Luis populations. Front disadvantaged and well-being of underserved patients caring for practices with member networks to maintain their separate and very unique identities. BIGHORN, CARENet, and BIGHORN are independent PBRNs that can conduct individual research studies, yet can function more efficiently thanks to the infrastructure provided by SNOCAP.
