Patents and Intellectual Property Development

02/2009	<i>US Patent #61/148,783: Medical Communication System for Health Care Practitioners.</i> This invention enhances sharing of medical information among health care teams. It maps medical-staff workflow and messaging to wireless, mobile-client systems using intelligent rules and privacy principles for healthcare application. The patent is currently licensed to Synaptin, LLC, an Ann Arbor based healthcare technology firm. The concept leading to this patent was honored as “Innovation of the Year,” at the Society of Hospital Medicine Annual Meeting, 2010.
02/2014	<i>US Patent Pending: Intelligent Safety Intervention System.</i> This invention features an electronic, wireless sensor system that tracks the presence and duration of indwelling urinary and vascular catheters and other medical devices in hospitalized patients. The system uses a proprietary technology and workflow to graphically alert providers to catheter presence and duration using a light-panel affixed to patient beds.
06/2017	<i>The MAGIC App.</i> This patent is for a smartphone-based application that features an algorithm to select the most appropriate intravenous catheter for hospitalized patients. The algorithm is based on my 2015 publication in the <i>Annals of Internal Medicine</i> . The app is freely available on the iOS and Android platforms and has been downloaded over 50,000 times since launch (last checked January 2023). The App has also been integrated into electronic health record systems to facilitate decision-making within pathways, wizards and workflows in this setting.
