Dear Friends and Colleagues.

How will Covid-19 change the way we take care of patients, teach medicine, and create new knowledge? I've brought this up in bit and pieces previously but the **attached news** piece from this week's *Science* prompted renewed thoughts and attention. I'm glad to see that *Science* will publish a number of pieces in the future to address this topic. Marisha Burden, Sonia Flores, and I published a letter (attached) that begins the dialogue but there's much more we need to consider. These past 18 months have taught us a great deal, and I think these lessons can substantially enhance the impact and sustainability of our work. In the next couple of months, I'll be exploring ways we can broaden this discussion. **Please let me know if you'd like to be involved and what topics you think we should address.** Best wishes to you and your family.

David
