TREATMENT  
STRATEGY

## Chronic migraine patients who overuse migraine medicine needed for a research study

### **Purpose**

The purpose of this research study is to compare two commonly used treatment strategies for patients who have frequent migraines and who overuse migraine medicine to determine the better treatment strategy.

### **Main procedures involved:**

- Daily headache diary
- Some questionnaires
- Research procedures for this study will be added onto routine ongoing care visits at UCH.
- Participants will be randomized to either migraine prophylactic therapy and switching to a different medication than the one being overused or migraine prophylactic therapy without switching of the overused medication.
- Compensation provided

### **Inclusion Criteria:**

- Adults, at least 21 years of age
- Diagnosed with chronic migraines
