RESEARCH STUDY

Open Access Database of Standing Full Body Radiographs in Asymptomatic Volunteers

The goal of this research study is to characterize the spine as we age. This information can be used to guide doctors in improving patient care.

Who is Eligible?

Inclusion Criteria:
- Gender: Males and females
- Age: 40-85 years old

Exclusion Criteria:
- History of spine or neural axis surgery
- History of cancer with or without metastatic disease
- Connective tissue, rheumatologic (or other inflammatory arthropathies), or neurologic disorders
- History of knee replacement surgery
- Severe osteoarthritis of the hips/knees/ankles
- Spondylitis
- Compression fractures or other trauma of the spinal column
- Previous trauma/fractures of the pelvis whether or not surgery was required
- Previous trauma or fractures of the lower extremities requiring surgery
- Pregnant women
- BMI >37
- Oswestry Disability Index score >15
- Requires ambulatory assistance (cane, walker, or wheelchair)

There is no compensation for research participants in this study.

Principle Investigator: Dr. C.J. Kleck
