

Pictured: Dr. Brian Kavanagh (front center) and the University of Colorado School of Medicine Department of Radiation Oncology

Brian Kavanagh, MD, MPH, leads the University of Colorado School of Medicine Department of Radiation Oncology, a renowned institution at the forefront of cutting-edge cancer treatment. Known for his pioneering work in stereotactic radiosurgery and stereotactic body radiation therapy, Kavanagh is a former President of the American Society for Radiation Oncology (ASTRO), the largest professional organization in the field.

With a long-standing commitment to excellence, Kavanagh's department combines world-class expertise, innovative research, and specialized techniques to provide exceptional care for patients and advance the field of radiation oncology. Guided by a passion for improving patient experiences and outcomes, the department strives to offer state-of-the-art therapies while training the next generation of radiation oncologists. With invaluable help from a devoted team of support staff, they provide over 60,000 treatments per year to cancer patients at six locations throughout the Denver metro region and Southern Colorado. At the core of the department's success are compassionate and highly skilled radiation oncologists who possess nationally recognized expertise. Faculty members in the Department of Radiation Oncology pride themselves on offering the best possible individual patient care tailored to each person's unique needs. They are leaders in their respective cancer subspecialty areas, contributing significantly to clinical research, laboratory science, and the development of national treatment guidelines. Their comprehensive understanding of various cancer types, including rare and complex cases, allows them to provide precisely customized treatment plans for each patient. By constantly exploring new treatment modalities, technologies, and therapeutic approaches, they aim to revolutionize cancer care and improve patient outcomes.
