

MultiD Week

During the second month of fellowship, the fellows will have a MultiDisciplinary week experience or “MultiD”. Each day of this week, fellows will be embedded with other members of the multidisciplinary team, including:

- Nursing
- Pharmacy, physical, and occupational therapy
- Speech language and pathology
- Rapid Response Team
- Case management
- Social work

Fellows and preceptors on these teams will have a set of learning objectives. The purpose of this experience is to grow an understanding of the many partners around the hospital and to learn how to work with them to obtain the best outcomes for the hospital's shared patients.
