

Required Student Immunizations

MMR- 2 shots OR Titer

Provide documentation of 2 MMR vaccines, OR a positive antibody titer to show immunity (lab report MUST be provided). If the titer is provided and is negative or equivocal, students must get one more MMR vaccine (booster) and then a repeat titer in 4-6 weeks. *Documentation is required.

Hepatitis B- 3 shots and possible titer

Provide documentation of 3 HEP B vaccines. Tracking Hepatitis B Initial Series- Students starting the Hepatitis B series, at their first shot will be marked complete but with an expiration date for a month as a reminder that the second shot is due. At the second shot it will be marked complete but with an expiration date set 5 months later as a reminder that the third shot is due. At the third shot, the HEP B requirement will be completed and will have an indefinite expiration date. If the HEP B series is not in the appropriate time sequence, then another shot (booster) will be required followed by a titer 4-6 weeks later. Tracking Hepatitis B Booster and titer – Once students have received their booster shot, it will be marked as complete but with an expiration date set to 6 weeks later. At the titer, the series will be marked as completed with an indefinite expiration date. Example 01/01/2099.

Varicella 2 shots OR Titer

Provide documentation of 2 Varicella vaccines OR a positive antibody titer to show immunity (lab report MUST be provided). If your titer is negative, you must repeat the series of 2 vaccines, and provide a 2nd titer. *Documentation is required. **History of disease NOT ACCEPTED**

Tdap

Please provide documentation of a Tdap vaccination that has been administered within the past 10 years. Expiration date will be 10 years from the date of the vaccine. *Documentation is required.

Tuberculin Skin Test (Renew Annually)

Please provide documentation of a negative PPD test. If you have never had a PPD, or if it has been over a year since your last PPD, then you are required to have the two-step method of testing done. The two-step requires placement of 2 separate PPD skin tests 7 to 21 days apart. If it has been less than a year since your last PPD, then only 1 is required. All skin tests need to be read within 48 -72 hours or another test must be done. Please list the dates and results for each PPD administered. Instead of a PPD, it is acceptable to provide negative "IGRA" Blood test (Quantiferon Gold or TSPOT Test) results annually. *Documentation is required upon entry to the program. If you have had a Tuberculin skin test (PPD) interpreted as positive, you are required to submit a radiologist's report of a chest X-ray declaring you free from infectious TB. If treatment is required, then you must complete the required treatment and submit an updated radiologist's report of a negative chest x-ray (within the last 5 years). Also, a document confirming no risk factors are present will be sent and must be completed. Expiration date will be 1 year from the date of test.

COVID-19 (2 shot series or 1 shot Johnson and Johnson)

Please provide proof of the 2 shot COVID vaccine series OR the Johnson and Johnson 1 shot COVID vaccine. *Please note: If you are getting the 2 shot series then both vaccinations are needed for approval. If both vaccinations are not provided the requirement will be rejected. If you have been granted a waiver form due to a Medical Exemption or Religious Exemption then please upload a completed form to complete this requirement.
