sample of NICU graduates with or at risk for neuromotor disability who were referred to Early Intervention;
2) Describe the associations between service timing, type and intensity and functional outcomes among a sample of NICU graduates with or at risk for neuromotor disability who were referred to Early Intervention. (\$25,000)

CCTSI Community Engagement Program

11/01/2018 – 10/31/2019

Promoting Early Identification and Intervention for Children with or at Risk for Developmental Delay. The primary objective of this pilot project is to inform the dissemination and evaluation of a community-based tool that (1) enhances shared decision-making between caregivers, family members, and service providers, and (2) improves early identification and intervention for children with or at risk for DD. This aligns with our broader goal of developing a community translational research agenda that raises awareness, highlights the importance of community-based solutions, and reduces racial/ethnic disparities in the early identification of children with DD living in the 2040 footprint, and their use of early intervention services. (\$30,000)

Magnusson D (PI) UCD-Department of PM&R

03/01/2017 – 02/28/2018

Development of a novel decision aid to improve early identification and intervention for children with developmental delay. The objectives of this study include: 1) assessing community beliefs regarding the help-seeking pathway for children with developmental delay, 2) identifying factors that promote or impede the integration of standard developmental surveillance screening guidelines and pediatric therapy service recommendations with community beliefs, and 3) developing a novel decision aid that integrates evidence-based guidelines and service recommendations. (\$10,000)

Magnusson D (PI) Academic Pediatric Association/Bright Futures

03/01/2015 – 02/28/2016

Anticipatory guidance for parents of children with developmental delay: Exploring the role of parent beliefs in Early Intervention utilization. The purpose of this study was to explore the complex interrelationship between parent beliefs and early intervention use in a large metropolitan area in the United States, and to inform family-centered anticipatory guidance for parents of children with developmental delay. (\$15,000)

Magnusson D (PI) Foundation for Physical Therapy, PODSII

09/01/2013 – 08/31/2014

Individual, Community, and State Level determinants of Unmet Need for Physical, Occupational, or Speech Therapy Services among Young Children with Developmental Delay. The purpose of this study was to examine the individual, community, and state-level determinants of unmet need for physical, occupational, or speech therapy services among children with developmental delay living in the United States. (\$15,000)
