

What is ACCORDS?

Adult and Child Center for Outcomes Research and Delivery Science

ACCORDS is a 'one-stop shop' for pragmatic research:

- A multi-disciplinary, collaborative research environment to catalyze innovative and impactful research
- Strong methodological cores and programs, led by national experts
- Consultations & team-building for grant proposals
- Mentorship, training & support for junior faculty
- Extensive educational offerings, both locally and nationally

ACCORDS Upcoming Events

June 5-6, 2023

10:00 -3:30 PM MT

AHSB Conference Center

COPRH Con 2023

Reassessing the Evidence: What is Needed for Real World Research and Practice

Featured Speakers:

Ross Brownson, PhD | Washington University in St. Louis

Faith Kares, PhD | Beloved Community

Maria Fernandez, PhD | University of Texas Health Sciences Center at Houston

Ned Calonge, MD | Colorado School of Public Health

Register now at www.COPRHCon.com

*all times 12-1pm MT unless otherwise noted

Methods and Challenges in Conducting Health Equity Research

2022-2023 Seminar Series

Advancing Health Equity in Cancer Prevention and Control through Implementation Science

Presented by:
April Oh, PhD, MPH

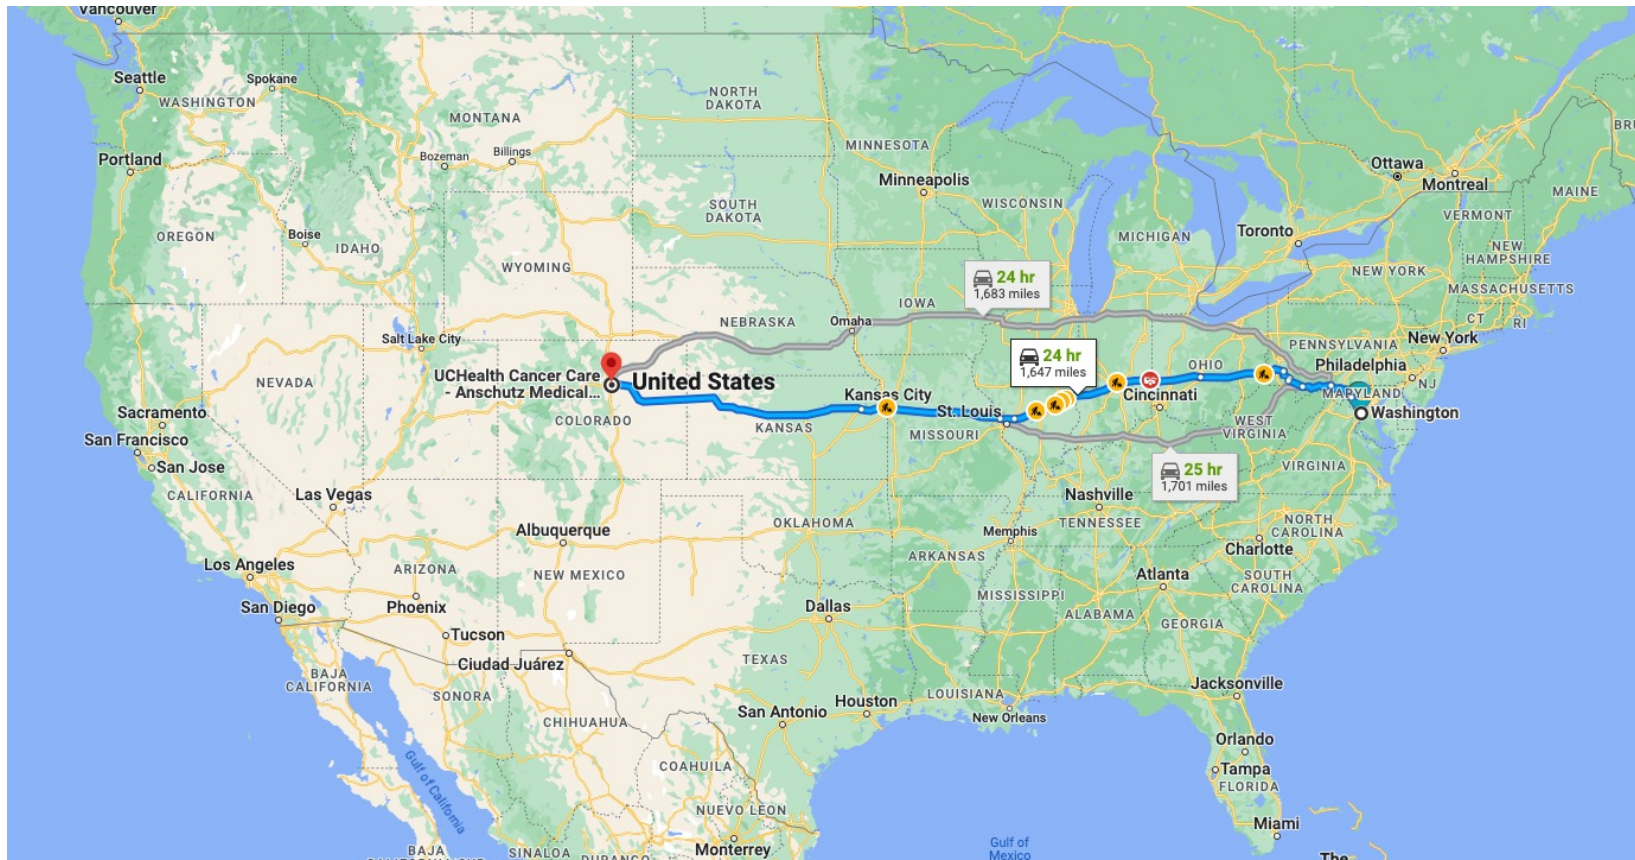

Advancing Health Equity in Cancer Prevention and Control through Implementation Science: *Moving Our Evidence Base into Action for All*

ACCORDS Methods and Challenges in Conducting Health Equity Research

April Oh, PhD, MPH

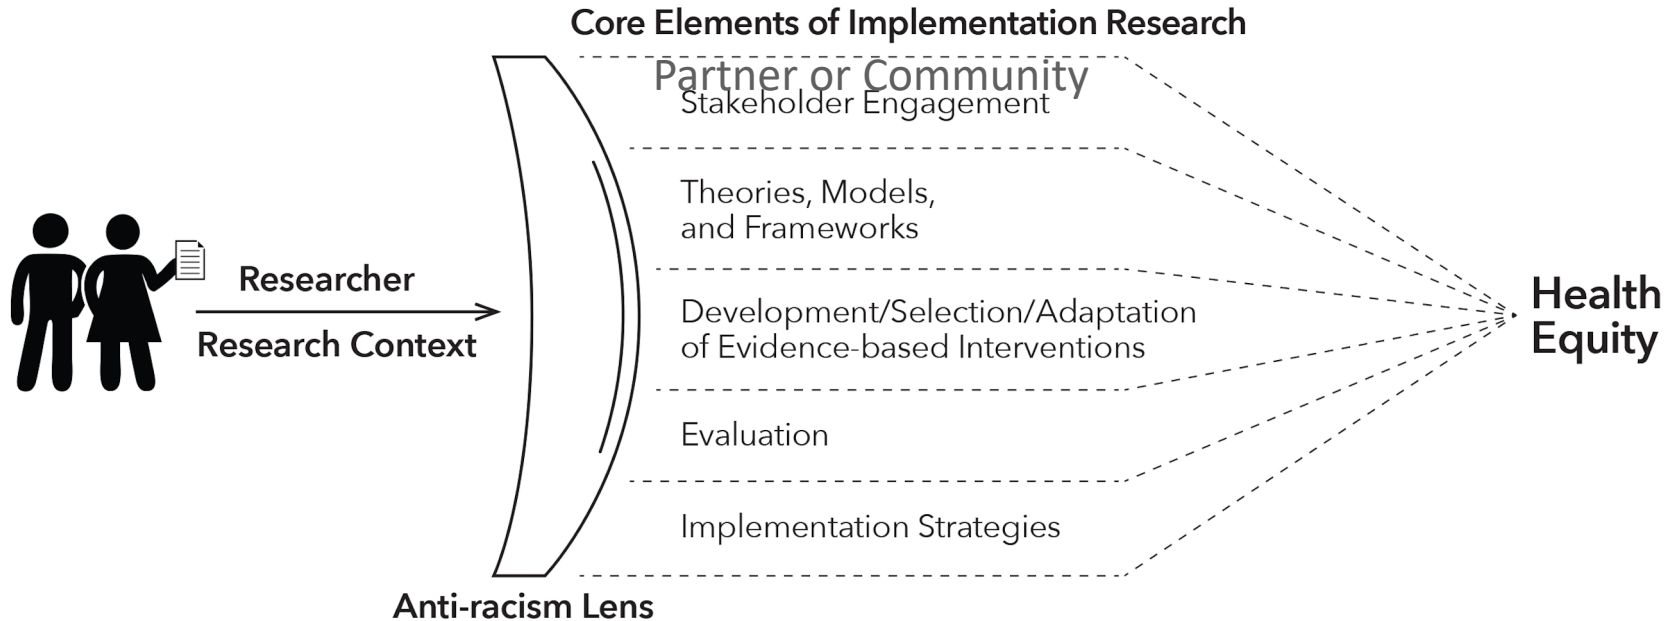

*Senior Advisor for Implementation Science and Health Equity
Division of Cancer Control and Population Science, National Cancer Institute, USA*

*Views are my own and do not reflect
my employer, the National Cancer
Institute, NIH.*

Data Strategies

Modifiable Risk Factors

Climate Change

Evidence-based Policy

Digital Health

Agenda

Why is an Equity lens important in Implementation Science?

- Our Evidence-Based Interventions (EBIs) may be inequitably applied to those with more resources
- Pragmatic approaches require an understanding of the “real-world” including history, local resources, and recognize local capacity that can impact disparities and sustainability
- Community (or “Stakeholder”) engagement is an essential component of implementation models and frameworks
- Emphasis on context, multilevel approaches and intersecting systems which may be barriers or facilitators to implementation

Are innovations addressing or exacerbating disparities?

Are there inequalities that are part of the context creating barriers?

Are there opportunities to engage key Community Partners?

What are culturally, historically, and contextually appropriate strategies for people/places do the thing?

How much and how well was the innovation implemented? Who benefits?

Evaluation of Disparities and Equity based on common definitions

Equitable Implementation

“Equitable implementation occurs when strong equity components (including explicit attention to the culture, history, values, and needs of the community) are integrated into the principles and tools of implementation science to facilitate quality implementation of effective programs for a specific community or group of communities.”

Six Considerations for Advancing Equity through Implementation Science

1. Conceptualizing Cancer Control Equity

Cancer control equity:

Everyone has a fair and just opportunity to prevent, detect, receive quality care, and survive cancer with optimal quality of life.

The way in which practitioners define health equity may not be the way *the community* defines health equity.

That is, part of the process of achieving health equity is *letting the community define it*.

Practitioner Delphi Study, US Cancer Control (2021-22)

In Research & Practice Application:

- Health Equity as an Outcome
- Health Equity as a Process

Action
and
Evidence

2. Social Determinants of Health and Multilevel Approaches

3. Organizational “Equity Mindset”... or Foundation for Cancer Control Equity in three parts

“Mindset”: refer to the awareness, set of beliefs, and expectations individuals and communities hold around equity; their understanding of what it is and the importance of it; and their own and their institution’s responsibility in promoting it, to include aspects of accountability

How can you apply an equity lens in the actual groundwork of cancer prevention and control?

- A systemic approach is needed to shift the current mindset: increased ownership, prioritization, and accountability
- Build capacity in practitioners’ and leadership knowledge, resources, and skills for advancing and achieving equity in practice
- Broadening the scope of equity beyond race/ethnicity

Organizational policies and strategies for fostering equity in implementation.

- Organizations need to implement equitable practices internally.
- Promote incentives and/or processes for holding organizations accountable.
- Broaden equitable access to health related data, resources, and tools.

**The Health Equity Research and
DEIA in Research Organizations
are Hand in Hand**

Partnering with Communities

- Context of Community partnerships
 - COVID-19 pandemic highlighted value
 - Fostering trust and transparency
 - Build, do not manufacture
 - Systems accountability for fostering community partnerships
- Partnership Process
 - Partnerships need be beneficial to community organizations and community members in tangible ways.
 - Structures for community partnerships and what works can vary.
 - More efforts need to be made to engage community members and to reimburse them.

Areas for growth - → advance power sharing, extends reach beyond cancer care, need for best practices

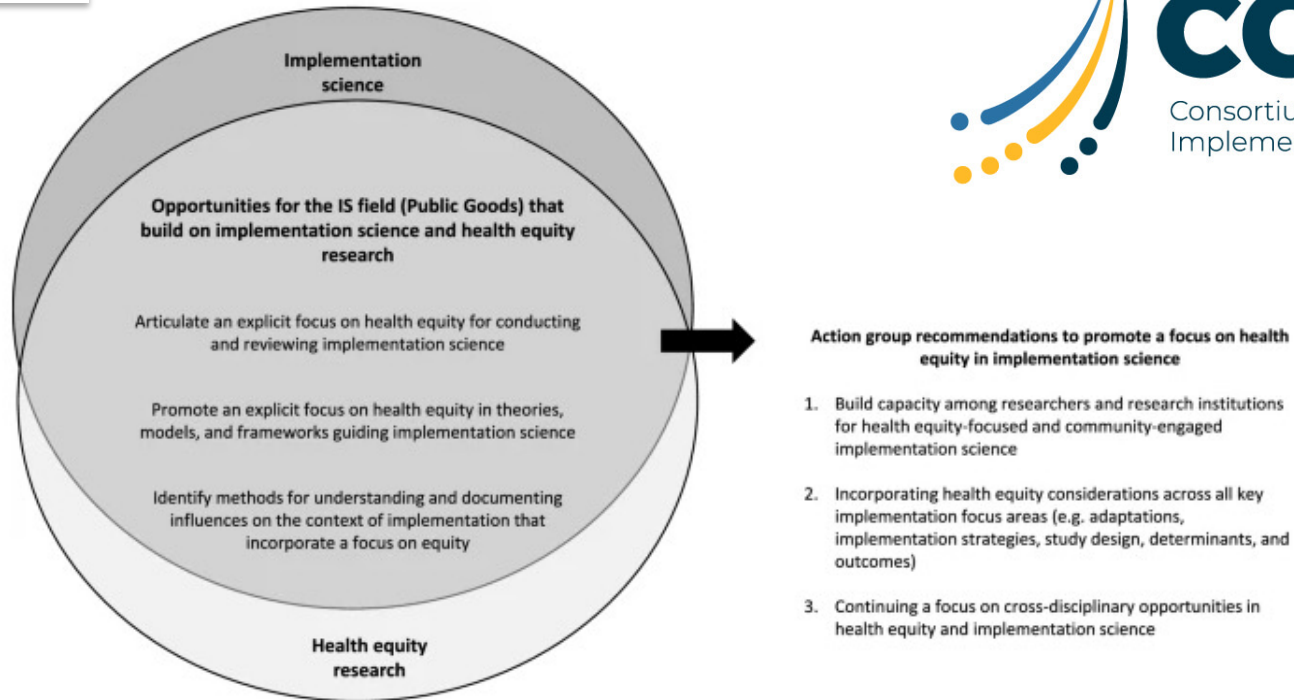

Continuum of Community Engagement

<i>Community Perspective/Experience</i>						
We do not know about this project	We may or may not be aware of this project but our information informed it	Researchers met with us to present the project and asked for our input	Researchers provided opportunities for us to participate (e.g., recruitment, community advisory board)	We told researchers what questions we need answers for	We participated in all aspects, equitably	We fully own the research
No Community Involvement	Community Informed	Community Consultation	Community Participation	Community Initiated	Community Based Participatory Research	Community Driven/Lead
We had no contact with the community	We sat in on a meeting and learned a great deal	We met with several community organizations, they shared their concerns and gave us suggestions	We have a defined role(s) for community to participate in the research	We created the research in response to community identified issue(s)/question(s)	We developed the project together with community partners	The community is in charge and we support their efforts when asked
<i>Researcher Perspective/Experience</i>

Open Access Tools

Capacity Building Database

The Implementation Science Centers in Cancer Control (ISC³) Capacity Building Database includes a variety of resources for researchers, practitioners, trainees, and anyone else interested in learning or using implementation science.

Use the ISC³ Database below to find resources for:

- Learning the basics of implementation science
- Advancing your implementation science skillset
- Using implementation science in your studies or office

If you have a resource you think should be included in the ISC³ Database, please send details including the resource name and description to isc3@icf.com.
