

COVID-19 Vaccine Hesitancy Religious and Cultural Concerns

Ask your religious leaders

Wrong Beliefs regarding the COVID-19 Vaccine

- COVID 19 vaccine contains fetal tissue that has been aborted.
- COVID 19 vaccine contains pork gelatin.

COVID 19 vaccines, Pfizer, Moderna and (J&J/Janssen) are free of fetal components, and free of pork gelatin or any animal component.

COVID 19 vaccine contains DNA which will make changes in human cells

- Pfizer, Moderna and (J&J/Janssen) are COVID-19 vaccines.
- They don't contain DNA; thus, they won't harm your cells.
- COVID-19 vaccinations instruct the body's cells to produce an immune response.
- This reaction protects you from contracting COVID-19 in the future.
- After producing an immune reaction, the body removes all vaccine components.

Some people prefer to contract the illness and develop natural immunity

The research found that people who did not take the COVID-19 vaccine after recovering from COVID-19 illness are twice more likely to have COVID-19 infection again than those who are fully vaccinated after their recovery
